1. React Assignment: Create a contact page project.
2. Submission deadline :- 7th March.
3. Submission mail :- info@oneoath.in
4. Join the whatsapp group :- https://chat.whatsapp.com/FnQ9vNXVgIP0OHVZBRGBOa (once you join the group drop your names and make sure to submit the assignment .)
5. All further information will be provided in the group itself.

Objective:
To create a dynamic and visually appealing contact page using React, which includes a form with fields for name, email, phone, and message. The form submissions should be sent to a Google Sheet for data collection. The project should be deployed on Vercel and include thorough documentation.

Requirements:
1. Contact Page Design:
   - Design and implement a contact page with a modern and user-friendly interface.
   - Include form fields for:
     - Name
     - Email
     - Phone
     - Message
   - Ensure proper validation for each form field to maintain data integrity.
   - Implement a submit button to send the form data.

2. Google Sheets Integration:
   - Set up a mechanism to send form submissions to a Google Sheet for data collection.
   - Utilize Google Sheets API or other appropriate methods for integration.
   - Ensure secure handling of user data during transmission.

3. Creativity and User Experience (UX):
   - Encourage creativity in designing the contact page while prioritizing a seamless user experience.
   - Implement features such as:
     - Interactive animations or transitions.
     - Visual cues for form validation.
     - Responsive design for various screen sizes and devices.

4. Deployment:
   - Deploy the project on Vercel or a similar platform for hosting React applications.
   - Provide the Vercel deployment link as part of the submission.

5. Public GitHub Repository:
   - Create a public GitHub repository for the project.

- Include clear and concise documentation detailing:
  - Project setup instructions.
  - How to run the project locally.
  - Details on the Google Sheets integration.
  - Any additional features or customizations implemented.
- Ensure well-structured code with appropriate comments for better understanding.

Additional Requirement:
Preferably, use Next.js for building the project, leveraging its server-side rendering capabilities and routing features for optimized performance and enhanced SEO. However, you're open to using other React frameworks if you feel they better suit the project's requirements.

Evaluation Criteria:
1. Creativity (30%):
   - Originality and creativity in designing the contact page.
   - Innovative features or design elements that enhance user experience.

2. Functionality (30%):
   - Proper functioning of the form with accurate validation.
   - Successful integration with Google Sheets for data collection.

3. Documentation (20%):
   - Clarity and completeness of the documentation provided in the GitHub repository.
   - Detailed instructions for setup, deployment, and usage.

4. Code Quality (20%):
   - Clean and well-structured codebase following React best practices.
   - Proper commenting and code organization for readability and maintainability.

Submission Guidelines:
1. Submit the Vercel deployment link for the contact page.
2. Share the link to the public GitHub repository containing the project code and documentation.
3. Ensure all necessary documentation is included in the repository.
4. Submission should be made before the deadline specified.
5. During submission share your contact details.
